## STATEMENT OF INTENT > Intention

The aim of this project is to build a website to go along side my youtube channel. I intend to code my website from scratch using HTML, CSS, JAVASCRIPT, PHP and SQL.

My website will be capable of the following features:

- Different pages including Home, About Us, Contact Us.
- Search feature that locates what you are looking for within a forums section
- Register and Sign in page
- Forums area that you can only access when making an account, this will include a place to comment on posts
- File Share area for people with an account
- Downloads page and file share area for people with an account
- A place for all my youtube content
- A store to buy merchandise

My intention for creating this website is so I have a place for people to come and buy merchandise, look at my content, ask me questions and download game resources that I use. I am also creating it as another way of reaching out to people so I can gain a larger audience/following. The money made from the merchandise will go towards further development on the website and also go into better equipment that I can use for creating both real life and gaming content.

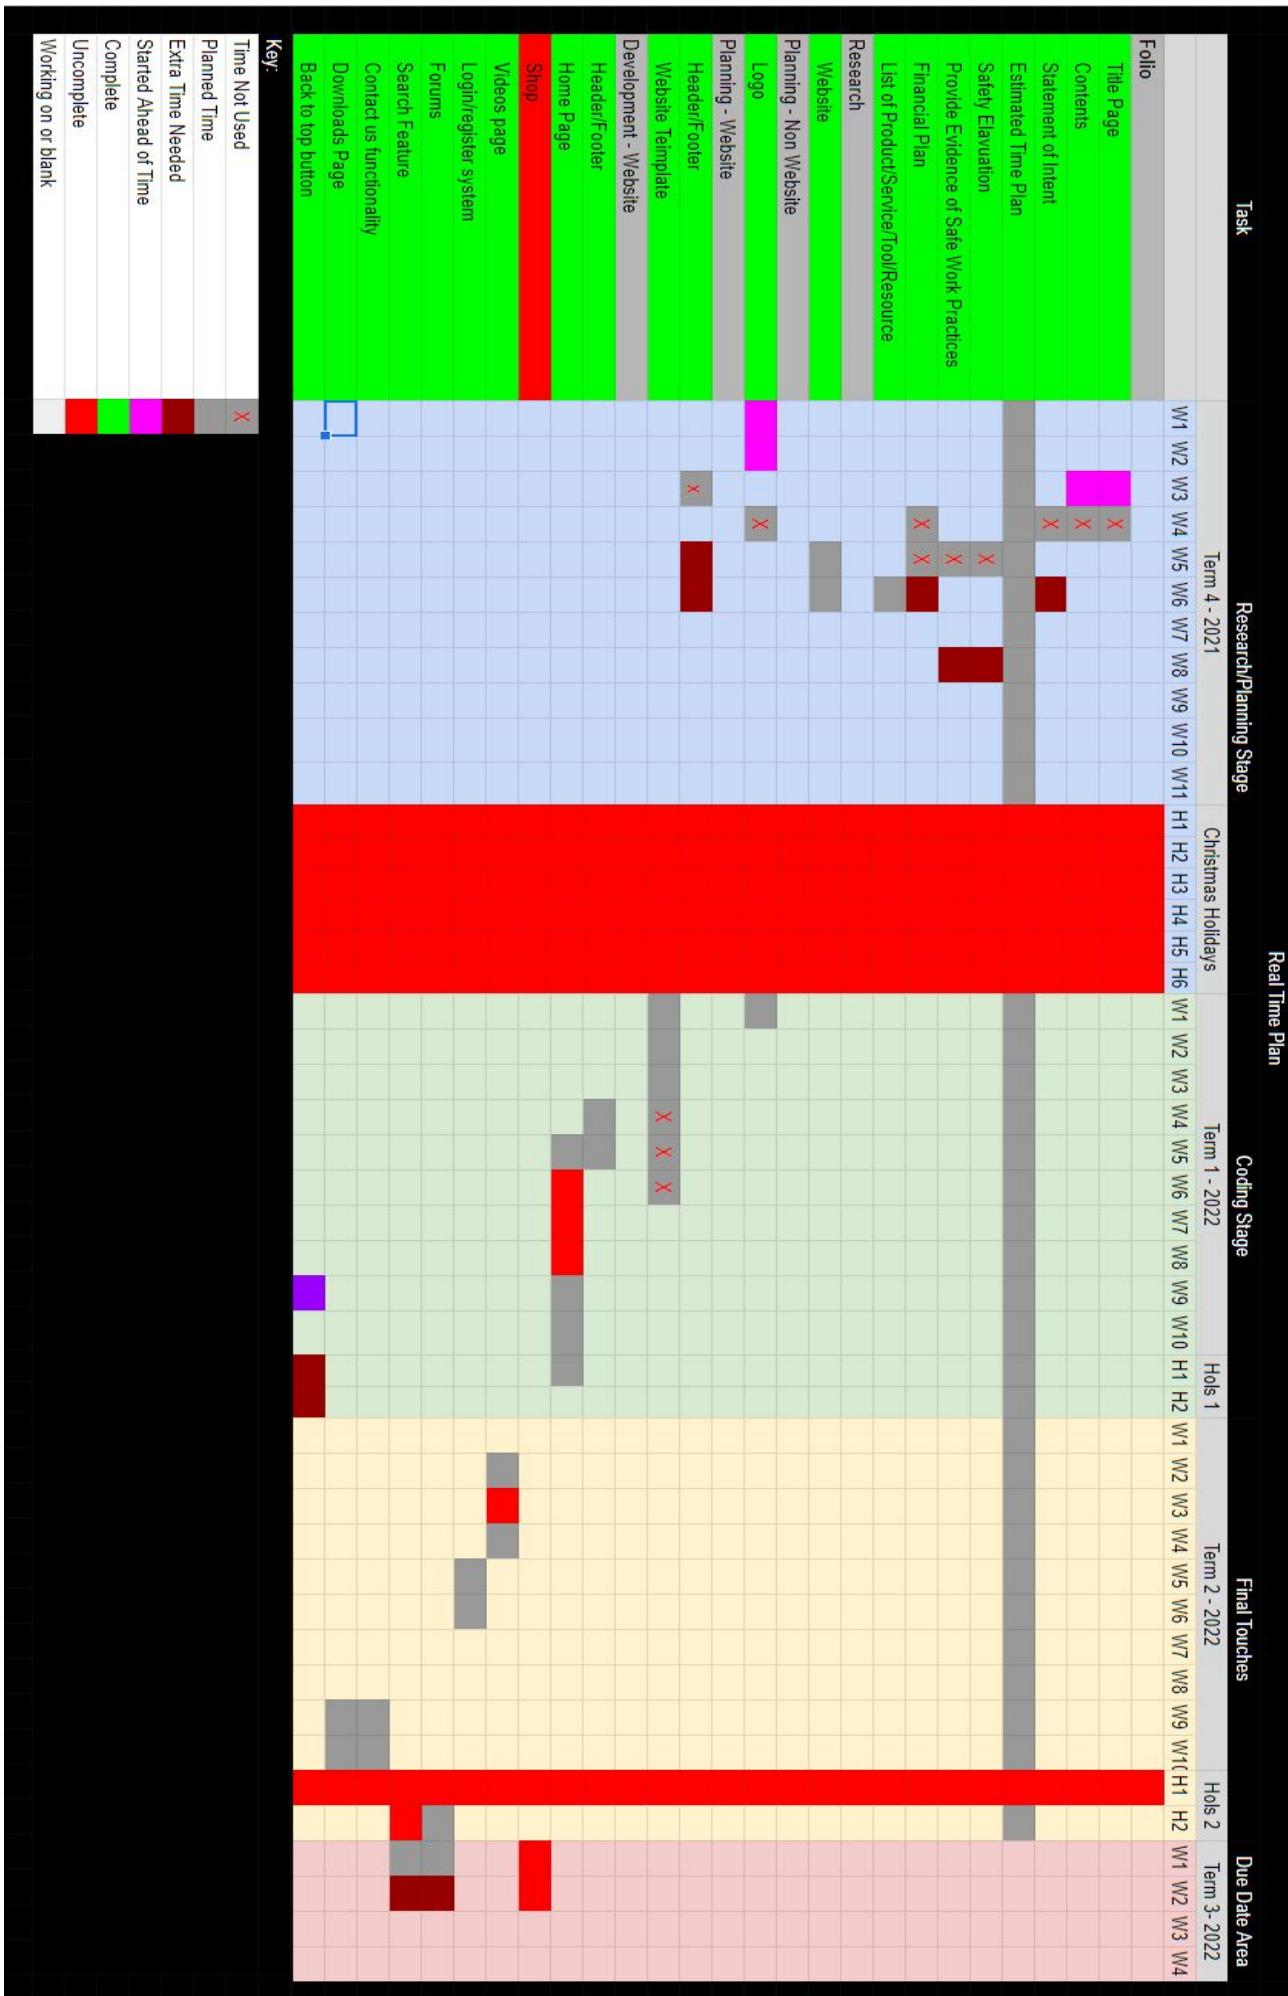

I plan to code the whole website from scratch using the Adobe Creative Suite. I will also use some widgets from an outside source. For any documents I need to create I will use the Google Suite. For hosting the website I will use WampServer. WampServer will be used at school and home for testing and prototyping and it will also be used when marking the assessment. I will have a portable hard drive for storing all the files to transport from home to school and back. I will make a full template of the website using WIX, an online website creator tool. Lastly, I will use the Adobe Creative Suite for designing and producing any pictures, logos, etc. that I will need.

I hope that the end product of this project will show my full capabilities across design, development and management skills, and I also would like it to prompt an employer to offer me a job in the multimedia industry.

On top of this project I will be connecting my YouTube channel onto the website and all the videos as well. I am doing this because I have made the thumbnails and edited the videos myself which means they can also be taken into consideration when marking the project.

## TIME > Estimated Time Plan

## TIME > Actual Time Plan

## TIME > Evaluation

- ~ = Neutral
- ✓ = Positive
- ✗ = Negative

- ~ In the nature of my project, I am always finding new things I need to add to my timeplan - therefore it is an ongoing part of the folio.
- ✓ Some sections of the project I was able to complete ahead of schedule which helped to give me more time on harder sections on the task.
- ✗ Some areas of the task were harder than others which, unfortunately, resulted in me requiring more time than expected.
- ✗ I was out of action during the 6 week holiday period which put me a little behind but I was able to catch up further in development.
- ✗ Unfortunately, I was unable to create the Shop or the File Share systems for my website. The Shop ended up being too complex and the File Share would have taken too much time.

## Finance > Estimated Finance Plan

Product/Service	Provider	Quantity	Value	My Costs
Full Desktop System setup: Desktop, 2 Monitors, Headphones, keyboard, Mouse, Mouse Pad, Monitor Arms, Chair, Desk,	ScorpTec	1	\$2700.00AUD	\$0.00AUD (Already Owned)
Web Domain	Hostinger	1yr	\$8.99AUDyr	\$0.00AUDyr
Website Hosting Service	Hostinger	1yr	\$140.41AUDyr	\$72.73AUDyr
WampServer	WampServer	2	\$0.00AUD	\$0.00AUD

				Total: \$4,063.65AUD
				Total: \$273.00AUD

**Finance > Finance Evaluation**

~ If I didn't have access to the services I had from the NSW Department of Education, the costs would have been really expensive to cover.

- ~~~~ = Neutral
- ✓ = Positive
- ✗ = Negative

✓ I had access to certain services through the NSW Department of Education which help with costs, I also already had most the hardware I needed ready to go.

At the beginning of this project, I was told that a hosting service and domain would be needed for marking of the project which I ended up paying for - I ended up going with Hostinger. Closer to the end of the project I was then told I wouldn't need it as we would just use WampServer. This kind of error would not be good in the Multimedia Industry as a business could find themselves at a loss.

When working on any multimedia project you must have a safe working environment. This means clearing any trip hazards so workers can't fall, and providing correct ergonomics including adjustable chairs, monitors, desks and keyboards.

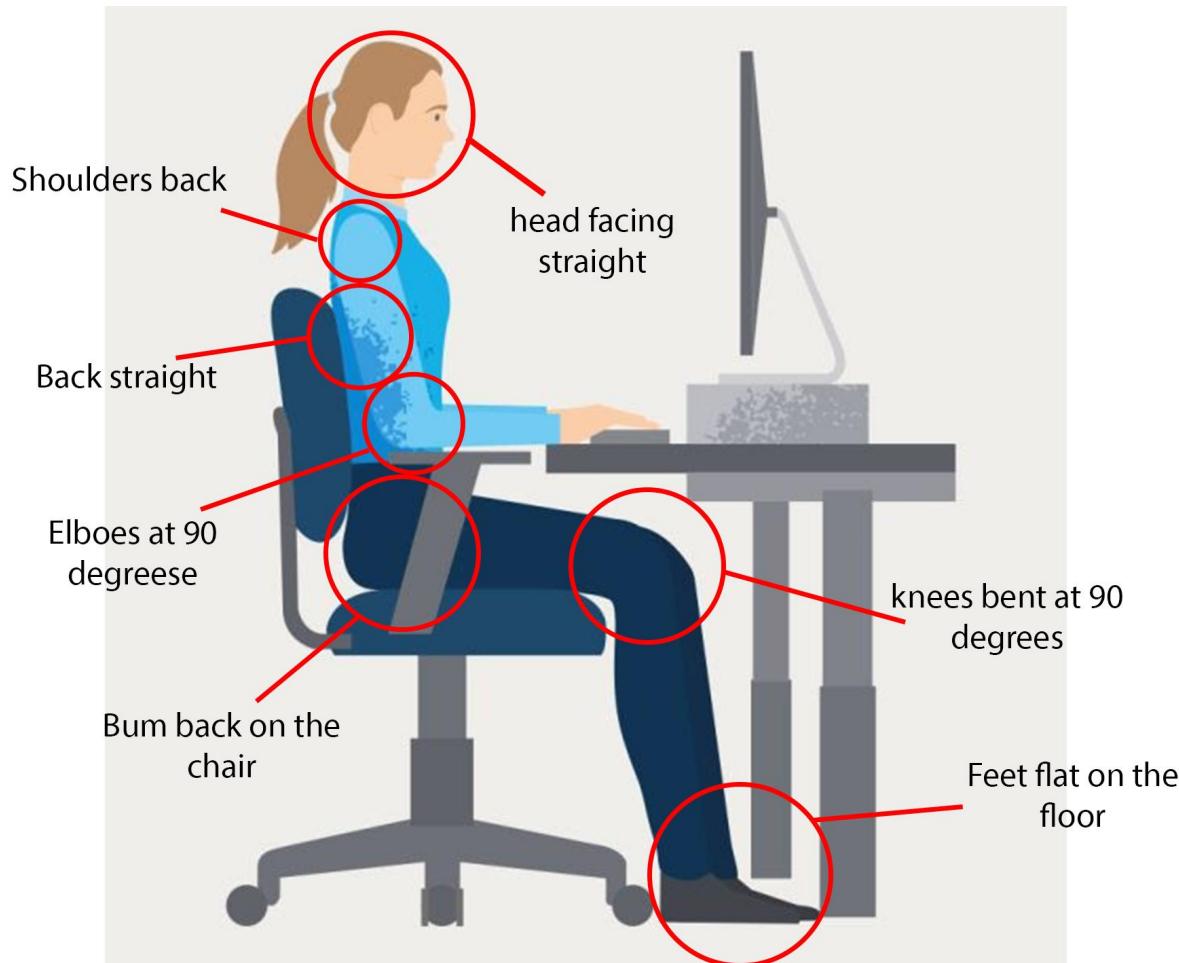

Adjustable chairs help posture when working for longer periods of time, chairs should adjust up and down and the back of the chair should be able to adjust back and forth. It is not good to sit for too long so providing workers with a sit/stand desk provides them the option to stand for certain amounts of time throughout the day. Monitors should be placed at eye level and, if possible, putting a monitor on an adjustable arm means the worker can change positions every now and then so they aren't in the same position for too long.

When working, employees must factor in break times to give their eyes a break and allow for movement throughout the day. Also you must provide correct lighting to ensure eye strain is reduced and glare is avoided.

Be sure employees have a nice clean workspace so they can work freely without the risk of damaging anything. Also clean up any broken items, trip hazards or spills straight away so no one gets hurt.

## SAFETY > Safe Working Procedure

WHS posters created as part of my year 11 Preliminary Course:

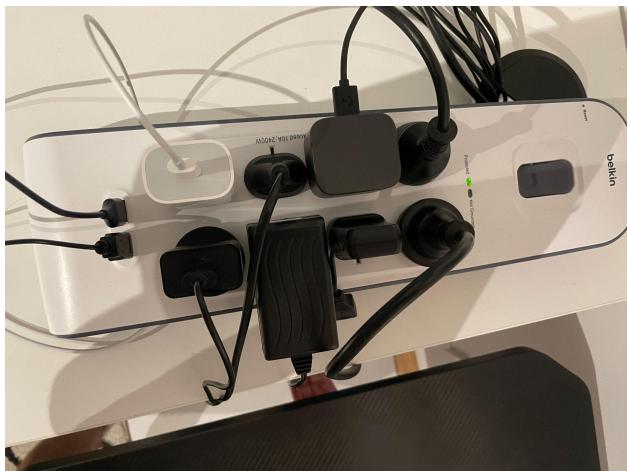

During this project I was sitting at a computer for hours on end so proper ergonomics had been considered. I had a well designed padded chair which can be adjusted going up and down and the back can lean forwards or backwards. The arm rests also are adjustable.

As well as an adjustable chair, I also had monitor arms attached to the back of each monitor to provide better posture.

As I worked I would give myself breaks to avoid eye strain. I would also monitor the lighting in the room by opening and closing blinds, turning the main lights on and I also have a lamp which I used.

I kept a nice clean work area with cords sitting at the back of my desk so there is no threat of trip hazard. I also made sure to have a clear desk so there was nothing to knock or break, this also provided for a nice space for me to work freely.

## Research > Design

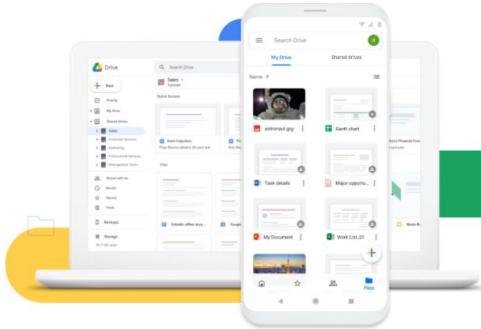

### Homepage:

When looking for homepage website designs I found that most popular designs started with a full screen image at the top then, as you scroll down, it transitions into a zig zag or grid pattern.

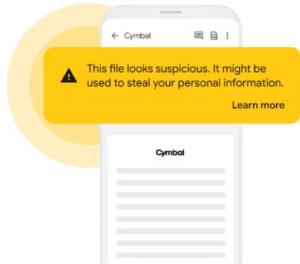

Easy and secure access to all of your content

Store, share and collaborate on files and folders from any mobile device, tablet or computer

[Go to Drive](#) [Try Drive for your team](#)

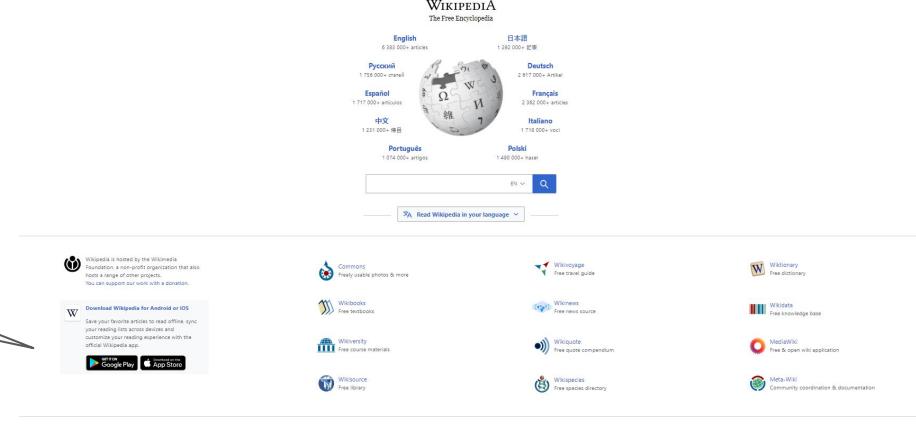

Google Drive homepage follows a zig zag pattern from the start of the page

Your content is safe, private, and never used for ad personalisation

Drive provides encrypted and secure access to your files. Files shared with you are proactively scanned and removed when malware, spam, ransomware or phishing is detected. And Drive is cloud-native, which eliminates the need for local files and minimises risk to your devices.

The Wikipedia homepage has their main logo with a radial design for certain links on there website. This is followed by a grid pattern underneath.

I would like to use elements of both these website designs. I will use a main image at the top followed by a zig zag pattern and maybe use a grid pattern at the bottom of the homepage.

In my homepage, I will include a preview of the videos and shopping pages and then at the bottom of the page I will include an area for my Social Media links and ways for people to get in contact with me.

## Research > Design

### Aspects of Design:

#### **Functionality:**

Whether a design works and helps the users meet their goals and needs.

#### **Aesthetics:**

A design's pleasing qualities. In visual terms, aesthetics includes factors such as balance, color, movement, pattern, scale, shape and visual weight.

#### **Material suitability and selection:**

Involvement in the manufacture or supply of materials, and the design, approval and construction of a product.

#### **Storyboarding:**

A sequence of drawings, typically with some directions and dialogue, representing the shots planned for a film or television production. Different types of storyboarding include linear, non-linear, hierarchical and composite.

#### **Factors determining appropriateness of design including:**

**Economics-** Refers to sustainability from a more resilient and participatory future.

**Environment-** Is the process of addressing surrounding environmental parameters when devising plans, programs, policies, buildings, or products.

**Manufacturing techniques-** The process of designing parts, components or products for ease of manufacturing with an end goal of making a better product at a lower cost.

**Sustainability-** The philosophy of designing physical objects, the built environment, and services to comply with the principles of ecological sustainability.

**Decoration-** Adorning of a space with decorative elements, sometimes complemented by advice and practical assistance.

**Anthropometrics and ergonomics-** Ergonomics describes information about humans in "working" situations. Anthropometrics deals with information about human body size and shape.

### Principles of Design:

#### **Proportion:**

The relationship between one part of a design to another. It is a comparison of sizes, shapes and quantities

#### **Balance:**

Balance can be symmetrical or asymmetrical. Symmetrical balance refers to an item that looks the same on both sides of a line drawn through the center. Asymmetrical balance is when an item creates a feeling of equal weight on both sides even though they do not look the same.

#### **Rhythm:**

The repetition of an element to achieve movement in a composition. It allows the eye to move from one part of a design to another part.

#### **Emphasis:**

Refers to the focus of attention in the composition. It is the quality that draws the viewer's attention to a certain part of the design.

#### **Contrast, harmony and unity:**

Unity is the organization of the elements and principles into a cohesive and pleasing whole design or composition. Harmony is how well things work together and contrast is differences between the other parts.

It is important that I consider all of these principles and aspects of design when creating my website so everything fits together without being cluttered, and so everything works together with all important elements standing out how they should.

## Elements of Design:

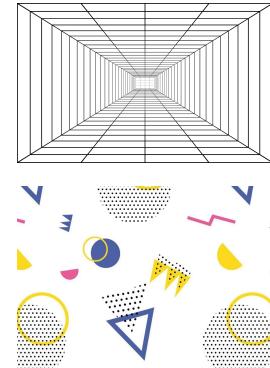

### **Line:**

- The line is one of the most essential elements of design.
- More length than thickness.
- Can be unbroken, broken, or implied.
- Can be vertical, diagonal, horizontal, and curved.
- Can be any width, size, shape, position, direction, interval, or density.

### **Direction:**

- Direction is the way the lines face
- it helps determine reading pathways and flow
- consist of lines, shapes, images etc. anything that help provide direction

### **Style:**

- Style is the fonts, colours and images that make the look of the website
- Style is very much the way the website is laid out and the way it moves

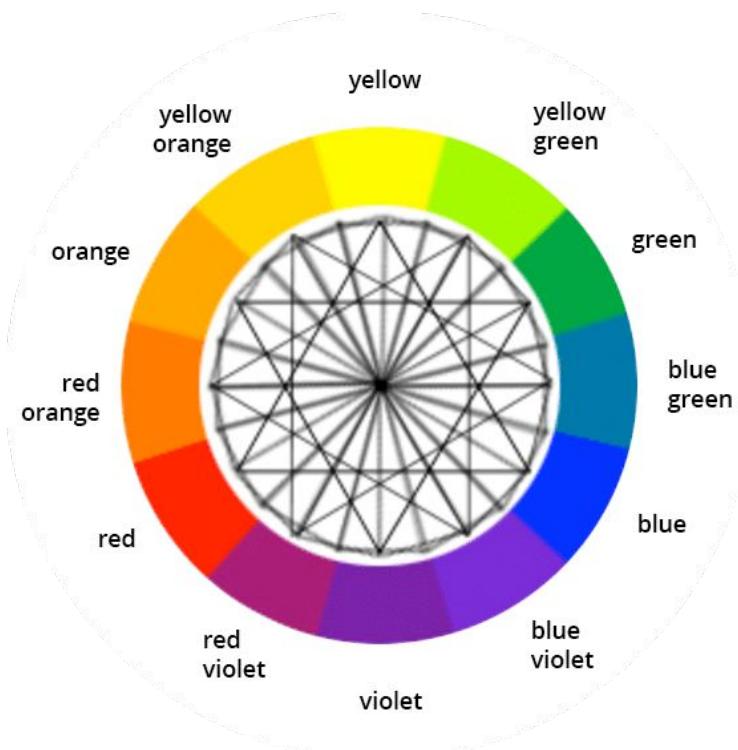

### **Shape:**

- A shape is a two- or three-dimensional object.
- Stands out from the space next to it because of a defined or implied boundary.
- Can live in different areas in space, and have other elements like line, color, texture, or movement.
- Two different types: geometric and organic
- The size can vary being huge or tiny.

### **Colour:**

- Help the organization of a design.
- Give emphasis to specific areas or actions.
- A few different properties: hue, saturation, and lightness.
- Tends to work best when there's both a dominant colour and a supporting colour.

### **The Colour Wheel:**

The colour wheel can be used to find colours that work well together and which colours contrast well.

Each colour on this wheel is apart of a triangle, the triangle points to the colours that contrast well with each other.

Colours that are next to each other are the ones that work well together

## Research > Design

### Texture:

- The way a surface feels, or the way it's perceived to feel.
- Has the power to attract or detract a viewer's eyes.
- Can be applied to lines, shapes, and forms.
- There are two types of texture: tactile and visual.
- Tactile textures are three-dimensional and can be touched.
- A visual texture, you can see it, not feel it.

### Typography:

- One of the most important part of graphic, web, and user interface design.
- Typography is the text you use when you are designing something.
- There are three main types, serif, sans serif, and Decorative.
- **Serif** has a more traditional and serious feeling.
- **Sans serif** has a more modern feeling.
- Decorative has a fancy feel to it.
- When using text it is good to use things like font size, font style and typographical emphasis. (e.g. bold, italics and underline)

For my website I have chosen to use Orange and Green as my main colours as they contrast well according to the colour wheel. I will also ensure when designing the website that I use smooth, flat textures and clean texts and shapes for people who are sight impaired, so they aren't strained when looking at the website. The website will also be user friendly for people who are completely blind so they can use a voice over application when accessing the website.

## Research > Functionality

I have decided to use Elfsight's subscription for web based widgets to add more dynamics and functionality to my website. It will cost me \$15AUD a month which is manageable. These widgets will make coding easier and I can design them myself using Elfsight's widget designing tools. Elfsight provides 80+ Apps that you can use for websites, widgets include: File shares, back to top buttons, automatic youtube video embedder, forms and more.

```

## Planning > Website

### Header:

Most modern websites have a logo in the top corner of their headers. I have decided to continue this trend as it is familiar to most users.

I wanted to make the buttons easy to use and understand, there will be a hover state for the buttons and a click state so you know if you're hovering over the button and if you have clicked it.

I have chosen the icon of a letter for the contact us button because people associate a letter with emails or contacting methods

This is a very common style for when someone has signed into your website, the circle is for the person's icon then there will be a drop-down arrow for more options related to your account. The login register button will be displayed here when not signed in

I have decided to include these dividers to provide a bit of separation between the logo, main page buttons and the search, login and contact us buttons.

I wanted to create a nice transition from the header to the websites page, so I thought instead of having a black line separating the header from the page, I would have a gradient instead. I would also like to make this line visible after scrolling down in the web page so you can click it and the header will appear.

I have chosen to put the search bar here for easy access and in most modern website headers the search bar is usually located in the header either in the middle or to the right hand side.

Template: <https://ecplayz1.wixsite.com/anonamouse>

### Header

I chose to use green and orange as my main colors because in my research I found that it is a pretty unique combination, also on the color wheel they are colours that contrast and work well together.

## Planning > Logo

Before the rebrand I was going with a website development and design company (Devign is an amalgamation of 'development' and 'design'). This is the logo design process I undertook which lead me to design the logo I have used for the final brand choice.

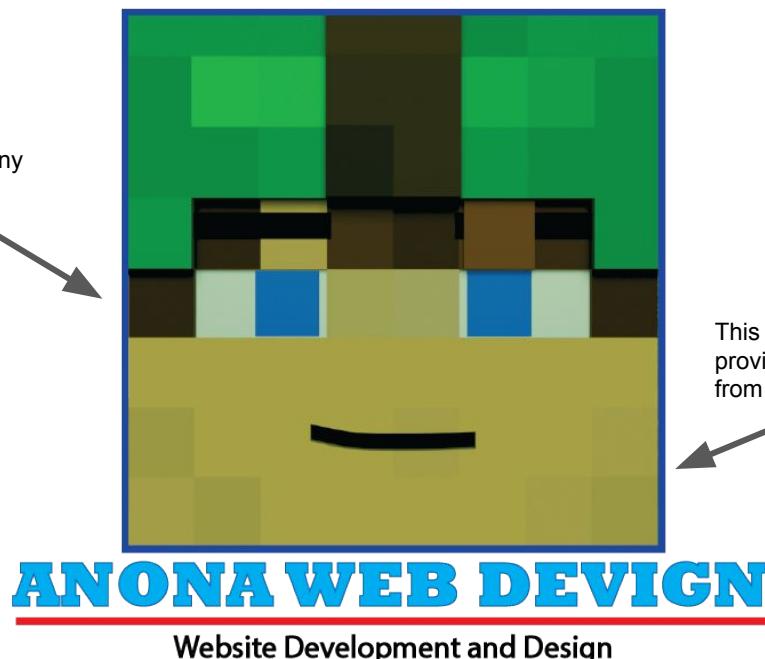

For a logo I would like to have a simple design. I would like to create a few types including a picture logo, a large picture logo with text, a logo with a slogan and a logo without the slogan. The picture logo will be the icon of the website for the tab bar, it would also be used for T-Shirts. The large picture logo will be used on the front cover of the folio and would also be used on posters, flyers and other advertisements. The logo with a slogan will be used for the header of the website and the logo without the slogan would be used for business cards and it will also be in the top right corner of the folio on most pages.

### Logo - First design

Name of company in big bold letters so it stands out.

Picture to provide an icon, this helps identify the company (when you see our icon you know it's us).

Large Icon for identity of the company

This added area around the image provides a nice border for transitioning from the image to the page it is on

### Logo - Redesign

Website Development and Design

These newer logo designs provide a cleaner look and a better colour palette suitable for my company. After showing the old designs to some people the feedback was it reminded them of Harvey Norman - their colour palette being blue and red, with the text being blue and similar to mine and the red being a line underneath the name of the company. I was not aware of this at the time of designing the first logo. This design of the new logo matches the colour scheme of the icon.

Logo - Rebrand

## Development > Website

### Website Images

#### Header

The header features a green navigation bar with the site logo 'ANONA MOUSE' on the left. To the right are five menu items: 'Home', 'Shop', 'Videos', 'Forums', and 'Downloads'. On the far right, there's a user account section with 'Hey, AnonamouseG' and 'Logout' links, and a red 'Contact Us' button.

```
<div class="Site">

    <!--Header-->
    <div class="header">
        <div class="o_button">
            <a href="Contact.php">Contact Us</a>
        </div>
        <?php
            if(isset($_SESSION["username"])) {
                echo('<div class="out">Hey, '.$_SESSION['username'].'
                echo('<a href="logout.php">Logout</a></div>');
            }
            else {
                echo('<div class="o_button"><a href="login.php">LogIn / Register</a></div>');
            }
        ?>
        <a href="Index.php" Index.php"">
            
        </a>
        <div class="nav_menu">
            <a href="Index.php">Home</a>
            <a href='videos.php'>Videos</a>
            <a href='forums_home.php'>Forums</a>
            <a href='Downloads.php'>Downloads</a>
            <a href="shop.php">Shop</a>
        </div>
    </div>
    <hr id="head_split">
</div>
```

#### Footer

The footer has a green background. It features the 'ANONA MOUSE' logo on the left and social media icons for YouTube, Discord, Facebook, Instagram, and Twitter on the right.

```
<div class="Site">

    <!--Footer-->
    <div class="footer">
        <div class="foot_social">
            <a href="https://twitter.com/anonamouseg" target="_blank">
                
            </a>
            <a href="https://www.instagram.com/anonamouseg/?hl=en" target="_blank">
                
            </a>
            <a href="https://www.facebook.com/tylornoel.shorter.1" target="_blank">
                
            </a>
            <a href="https://discord.gg/hKrWyDEWwq" target="_blank">
                
            </a>
            <a href="https://www.youtube.com/c/AnonamouseG" target="_blank">
                
            </a>
        </div>
        <a href="Index.php">
            
        </a>
    </div>
</div>
```

### Website Images

I used PHP to link my header and footer to each page so I only needed to edit one page and It would change for all of them

```
<!--Footer-->
<?php include "footer.php"; ?>

<!--Header-->
<?php include "header.php"; ?>
```

### Buy Merchandise

## assets

### css

#### style

Style.css - for all css styling and design for the website.

### helvetica\_font

This folder contains the font I used for the website.

### images

This folder contains all the images used for my site.

### About

About.php - This is the About Us page.

### AnonaPack Full Release 1

This .zip file is one of the downloads on my website.

### auth\_session

Auth\_session.php - This php file creates a session when someone logs into the website, it also makes it mandatory for someone to be logged in to access certain pages.

### Contact

Contact.php - This is the Contact Us page for my site.

### db

Db.php - This is to connect to my database.

### Downloads

Downloads.php - This page is my downloads page.

### favicon

Favicon.ico - This is the icon that is shown on the tab in your web browser when the website is open.

### footer

Footer.php - This is the code for the footer of the website, it's in its own file so you only need to edit the code once and it changes it for all pages

### forums\_create\_topic

Forums\_create\_topic.php - This is the topic creation page for my forums system.

### forums\_home

Forums\_home.php - This is the forums home page.

### header

Header.php - This is the Header for my site.

### Index

Index.php - This is the Home page for my site.

### login

Login.php - This is where users can log into the website to access features such as the forums and downloads page.

### logout

Logout.php - This is to log users out of the website.

### registration

Registration.php - This is where users can create their accounts.

### search

Search.php - This is for the search results for the forums

### Shop

Shop.php - This page is not complete but would have been a shop

### topic

Topic.php - this displays the topic selected by the user to the user along with its comments from the forums.

### Videos

Videos.php - This is where you can access all my videos content from my YouTube Channel

**P** = Problem  
**S** = Solving

**P:** Needed the bottom of this image to be on the line of the box but using the **<br>** tag either put it too far over or not far enough

```
.wel_h1 {
    font-size: 25px;
    font-family: "Gill Sans", "Gill
    padding: 43px 0px 0px 500px;
    text-decoration: bold;
}
```

**S:** I added padding above the welcome heading which pushed everything but the image down also lining the image up with the bottom of the box

**P:** When reloading a page in Chrome after making changes to the css file it wouldn't match the changes in chrome.

**S:** Had to use **Ctrl+Shift+R** to reload the Cache

**P:** Website appears differently on different screen sizes

**S:** I changed all values in CSS to use percentages rather than pixels

**P:** Had to use an id for login and logout so they looked different but I didn't know how to create a hover state when using an "id"

```
<div class="log_in_register">
    <?php
        if(isset($_SESSION["username"])) {
            echo("Hey, ".$_SESSION['username']."<br/>");
            echo('<a id="out" href="logout.php">Logout</a>');
        }
        else {
            echo('<a id="in" href="login.php">LogIn / Register</a>');
        }
    ?>
</div>
```

**S:** Instead of using an id I used a div inside the certain areas of code rather then a div around the whole section

```
<div class="header">
    <div class="o_button">
        <a href="Contact.php">Contact Us</a>
    </div>
    <?php
        if(isset($_SESSION["username"])) {
            echo('<div class="out">Hey, '.$_SESSION['username'].'<br/>');
            echo('<a href="logout.php">Logout</a></div>');
        }
        else {
            echo('<div class="o_button"><a href="login.php">LogIn / Register</a></div>');
        }
    ?>
```

## Project Log > Log

Term/Hols #	W/H #	Task	Tool/Resources/Links
Term 4, 2021	W1	Find and Pay for Website hosting/Domain service	<a href="#">Hostinger, Web Hosting Simplified</a>
		Set Domain: anonawebdevign.com	<a href="https://anonawebdevign.com/Index.htm">https://anonawebdevign.com/Index.htm</a>
		Start a temporary header for the website	<a href="#">W3 Schools</a>
			Adobe Dreamweaver
		Create business email	<a href="#">Hostinger, Web Hosting Simplified</a>
	W2	Design Logo	Adobe Illustrator
		Self teaching myself to code, Making Cheat Sheets	<a href="#">W3 Schools</a>
		Discovered the need to use 5 types of code (HTML, CSS, JAVASCRIPt, PHP, SQL)	N/A
	W3	Start Folio (Title Page, Contents, Statement of Intent)	Google Slides
		Continue self teaching myself code	<a href="#">W3 Schools</a>
	W4	Microsoft Word	
		Start Gantt Chart for predicted time plan	Google Sheets
		Redesign logo	Adobe Illustrator
	W5	Discovered can't access website or hosting site from school - Need new server hosting software for school and home Computer	WampServer
		Start Project Log and Links/Resources list	Google Docs
		Need Hard Drive	N/A
		Convert HTML Documents to PHP	Adobe Dreamweaver
	W6	Designed Header layout	Google Drawings
		Logo Complete	Adobe Illustrator
		Designed About Us Page	Google Drawings
		Designed Login/Register Page	Google Drawings
		Start and Complete Estimated Finance Plan	Google Docs
		Bought Portable Hard Drive	Officeworks
		FIinished Statement of Intent	Google Slides
		Table of Product/Service/Tool/Resource	Google Docs
	W7	Design Footer	Google Drawings
		Received Portable Hard Drive	N/A

## Project Log > Log

Term/Hols #	W/H #	Task	Tool/Resources/Links
		Installed WampServer and Hard drive software to home and school computers	N/A
		Interested all pages in Folio	Google Slides
		Putting in research and sketching into the folio	Google Slides
		Started time and finance Evaluations	Google Slides
		Aspects, Principles and Elements of design	Year 11 Multimedia research notes
	W8	Convert Website files to PHP	N/A
		Hooked up WampServer to Adobe Dreamweaver	N/A
		Completed Safety Evaluation	Google Slides
		Completed Evidence of Safe Work Procedures	Google Slides
	W9	Added hardware to tools resources page	Google Slides
		Decided not to have a resources page on the website but to include any resources in the file share area on the website	N/A
		Imported all tables and graphs needed for folio assessment task ready to hand in	Google Slides
	W10	Nothing was completed this week	
Term 1, 2022	W1	Starter Website Template	WIX Online Website Builder
	W2	Project Rebrand from Anona WebDevign to Anonamouse, this is for my youtube channel instead of a company	
		Continuing with template	WIX Online Website Builder
	W3	Completed Template	WIX Online Website Builder
	W4	Started Coding actual Website	Adobe Dreamweaver
		Completed main parts of header and footer	Adobe Dreamweaver
		Started Home page design	Adobe Dreamweaver
		Started using widgets (need permission to use)	Waiting on teacher permission
	W9	Got permission to use widgets	Head Teacher
		Added Back To Top button	Elfsight/Dreamweaver
		Added YouTube Video gallery	Elfsight/Dreamweaver
		Paid for Elfsight subscription	Elfsight
		Temporarily removed other pages to make it easier to add later	

## Project Log > Log

Term/Hols #	W/H #	Task	Tool/Resources/Links
	W10	Updated Folio (Problem solving, Development, Time Chart, Finance, WHS, Planning, Research, State of Intent)	
		External sources (my social links) now open in a new tab	
		Changing all elements in CSS to use percentages rather than pixels	
Term 2, 2022	W1-4	Wasn't really able to do much work because of Naplan and other school events, The reason for this is because I lost access to the computers during this time period	
		Decided to leave the shop until the end and to create login, forums and file share first	
		Finished Videos Page	
	W5	Starting to make database and code login/register system	Resources I found to help: <a href="https://speedysense.com/create-registration-login-system-php-mysql/">https://speedysense.com/create-registration-login-system-php-mysql/</a>
		User_master table created	PHPMyAdmin
		Started coding login and registration code	
		No longer need Domain and Hosting plans because marking will be done using WampServer from school computer - Updated finance plan	
		Login Register system up and running - Also forces you to login if you are on the forums or downloads pages	
	W8	Fixed Login button hover state	
		Started Contact Us page	
	W9	Finished Contact Us Page (does not send an email because I am using wampServer but it does store the contact in the database.)	
	W10	Started About Us page	
Term 3, 2022	W1-2	Finished About Us, Forums and Downloads pages.	
		Update Folio	
	W3-4	Complete styling for the website	
		Complete Folio	
		Get Feedback from teachers, parents, friends	
		Update everything base on feedback and hand in.	

## Final Evaluation > Overall Evaluation

 - Changing the plan a bit meant changing the statement of intent and other areas of the folio which took a bit of time but didn't affect time too badly

 - I was able to use the research we completed during the preliminary part of the course which gave me more time to develop the website and do other planning and research

 - Having made a template made coding the website easier because I knew what design I Wanted

 - I was told that a forums system and search feature would be really difficult but I was able to figure these out pretty quickly

 - Working out if I could use widgets took longer than expected

 - Having paid for a hosting service thinking I would need it but then being told afterwards I wouldn't was a bit annoying for cost

 - I didn't have enough time for the file share system or the shop, they would also turn out to be a lot more complicated than I first thought

Thanks the the following people:

- Saffron Fox - Being the first to test and preview the website
- Mr Hiley - Class Teacher
- Mr Foster - Head Teacher
- Miss Bailey - English Teacher

Others who have provided support, resources and feedback.

Exporting Files Process-

- Download the Google Slide file as a PDF
- Export the SQL from the Database
- Create a '.zip' file for the 'www' folder

Importing Process for Marking-

- Extract the 'www.zip' file into the 'Wamp64' folder
- Import the SQL to the Database
- Open the Anonamouse-Folio.pdf

I really enjoyed creating this website and I learned a lot of great skills that will help me gain further experience for a job in the future. I hope to keep developing and improving my website over time even after the marking process. If I had to change anything for this website I would have allocated more time for the development so I could get a file share system and a store completed.
